Target group
This dedicated training course aims at delivering the basics of nuclear and radiochemistry to trainees with a chemical background at Masters level (e.g. Chemistry / Chemical Engineering, and/or recent PhD students), who need to extend their skills and knowledge to the field of nuclear and radiochemistry.

Motivation
The lack of trained nuclear chemical specialists has been identified in all branches of nuclear industry and also in other areas where skills in NRC are required, such as radiopharmacy, nuclear medicine, radiation protection and radioecology, and many others. Retraining general chemistry graduates is one of the options for mitigating this problem.

MEET-CINCH Consortium
A Modular European Education and Training Concept in Nuclear and Radio Chemistry

http://www.cinch-project.eu

MEET-CINCH is a HORIZON 2020 EU Framework Programme project aiming to improve and evolve nuclear chemistry education and training in Europe.

The project closely collaborates with the European Network on Nuclear Chemistry Education and Training aiming to shift the education and training in nuclear chemistry to a new level.

Contact:
malinakova@fjfi.cvut.cz
**Objectives**

While the course does not substitute full formal training, it provides fundamental theoretical knowledge of principles and concepts in nuclear chemistry necessary for understanding the processes and methods in radiochemistry, and practical hands-on training required for the work with open ionising radiation sources (handling of radioactive materials, application of radionuclides and ionizing radiation, etc.).

**Arrangements**

The course is organised by the MEET-CINCH Consortium and it consists of a theoretical component which will be delivered through distance learning via CINCH Moodle (see and sign up at moodle.cinch-project.eu). The practical hands-on component will take place at laboratories of the Department of Nuclear Chemistry of CTU in Prague. All teaching will be in English.

**Location**

Department on Nuclear Chemistry  
Břehová 7,  
11519 Prague  
Czech Republic

**Admission Requirements**

For application for attendance of the course, please visit the MEET-CINCH web pages at www.cinch-project.eu/events/courses/, download the application form, and send the filled-in form to Štěpánka Maliňáková (malinakova@fjfi.cvut.cz). No course fee will be charged to the participants and a small budget exists to support a limited number of participants. Application deadline is May 31, 2018.

<thead>
<tr>
<th><strong>Introductory lectures (CINCH Moodle)</strong></th>
<th><strong>Practical exercises (Jun 18-22, 2018)</strong></th>
</tr>
</thead>
</table>
| **Fundamentals of nuclear chemistry 1**  
Structure and properties of atomic nuclei.  
| **Fundamentals of nuclear chemistry 2**  
Natural radioactivity. Radioactive decay chains.  
Nuclear fission, fission products. Hot atoms chemistry.  
Szilard-Chalmers system. Radiation chemistry.  
Actinides and transactinides. | Preparation of working solutions with required activity from the stock radionuclide. |
| **Radiation detection and dosimetry**  
Interaction of IR with matter (α, β, γ, neutrons).  
| **Prerequisites** | | |
| **Radiation protection**  
Distance learning course on CINCH Moodle.  
Participants have to successfully finish this course before entering the on-site course.  
| | Sample activation via neutron irradiation. |
| | Decay curve measurement and deconvolution, half-life determination. |
| | Gamma-spectrometry – calibration, efficiency, measurement. |
| | Liquid-liquid extraction of uranium. Uranium specific activity, estimation of its isotopic abundance. |
| | Liquid scintillation counting. |
